UNI-LJ SSTP-CLIENT VPN FOR MACOSX

1- Install homebrew from: https://brew.sh/

    1.1-Installation could result in a warning message:

        Warning: /opt/homebrew/bin is not in your PATH.

        Instructions on how to configure your shell for Homebrew

        can be found in the 'Next steps' section below.

        FOLLOW the following steps:

        ==> Next steps:

        - Run these two commands in your terminal to add Homebrew to your PATH:

        (echo; echo 'eval "$(/opt/homebrew/bin/brew shellenv)"') >> /Users/marco/.bash_profile

        eval "$(/opt/homebrew/bin/brew shellenv)"

2- run: brew install sstp-client

3- open the vpn using the following command:

sudo sstpc --log-stderr --cert-warn --user <tipically is your surname> --password <the same password for FIORI> vpn.fmf.uni-lj.si usepeerdns require-mschap-v2 noauth noipdefault defaultroute refuse-eap noccp

4- Open a new terminal window and connect to the server.
